Topic-**SMART EDUCATION TECHNOLOGY**

Team Information: Mithilesh Swain

Dev dipanjan

Abhisek swain

Ayaskanta Pradhan

College name: Institute of Technical Education and Research (ITER)

State: Odisha

Problem statement

01

There is a lack of online browser platform where learners can collaborate with other creators/friends or coders/tutors on a large scale
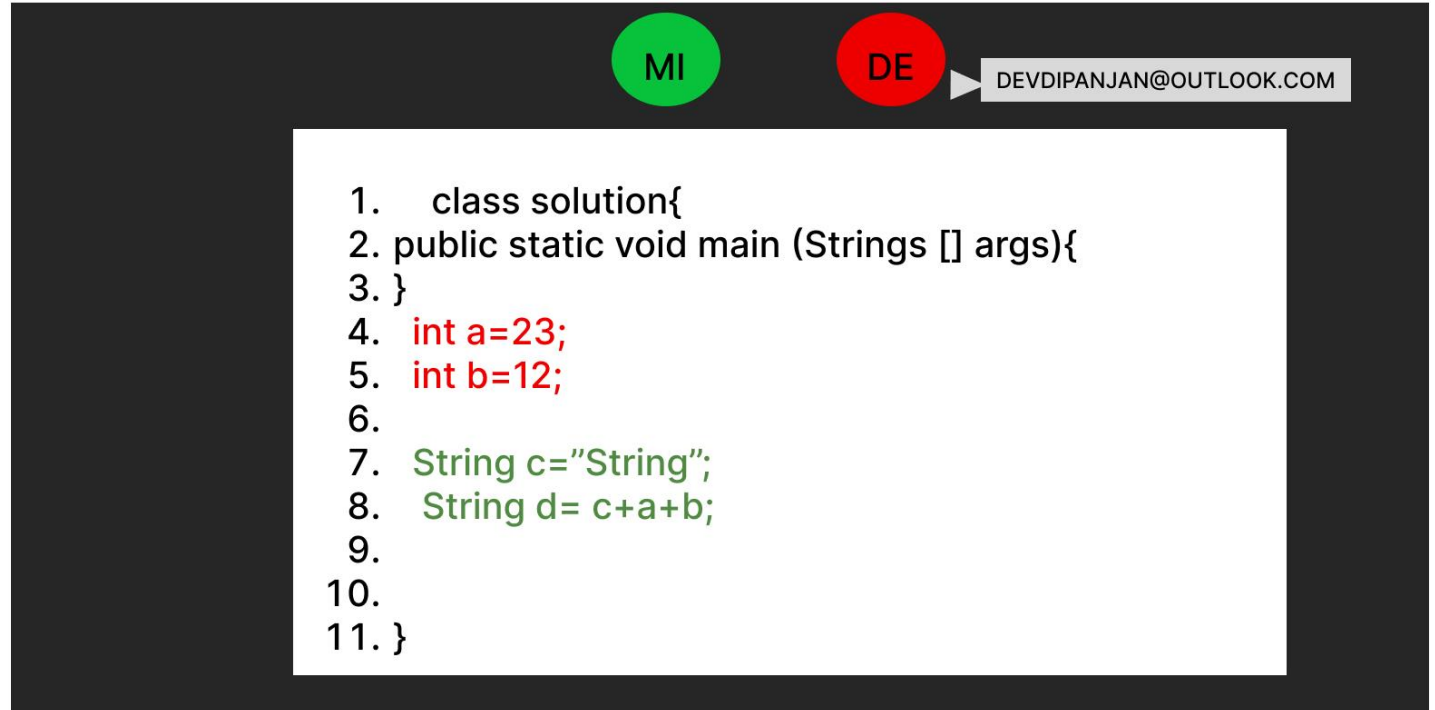

02

The live share feature of vs code is not available for online platforms, due to which there is a barrier for installing software .

03

We want to make it one step easier my removing the barrier for installing vs code or other editors for live editing of codes or simple docs

Solution

• Here as we can see that the 2 coders coder MI(mythiles) and De(dev) are using the editor at real time simultaneously.

• So we can use this on browser that removes the limitations of hardware,that helps to do the similar in real time

MI   DE   ▶ DEVDIPANJAN@OUTLOOK.COM

```
1.     class solution{
2. public static void main (Strings [] args){
3. }
4.    int a=23;
5.    int b=12;
6.
7.    String c="String";
8.     String d= c+a+b;
9.
10.
11. }
```

Solution

Abhi

Temporary   Permanent

Here you can create a temporary platform to code edit things that will vanish after time

Here you can create a temporary platform to code edit things that will vanish after sometime

WANT TO BE Permanent?

If you want to be a permant or buy a platform ,reserve a platform for your team pay for your team deserves

250/-   use our services ,valid upto 100 registered people

750/-   use our services ,valid upto 500 registered people

1050/-   use our services ,valid upto 890 registered people

solution

- So by this way we are elimnating on extreme reliabilty of hardware,due to which large sections of codes , texts can be edited even if your teamate is far from your office

- OUR TAGLINE-*GIVE WHAT YOUR TEAM DESERVES TO BE BEST*

Business Idea

We will be charging fees by the teams bigger than 20

We will be charging fees for enterprices amd companies who want our premium services.

Charging fees for the cutomer who needs a permanent class of our services.

Main target consumers – edTech,IT companies having hardware limitations.This leads to lower customer hardware expendeture, and switch or use chromeos(as this hardware are avilable at low costs) for the devs those do not have higher requiremnts.

Future enhancement

01

In the future enhancements , we are going to collaborate with voice messages and video calls

02

We are not going to Stop making innovation , and we are going to add Chatgpt for the help of Our customers.It would be most probably done by the use of chatgpt api.

03

We are going to add quiz options , depending upon the requirements
